#	Method	Endpoint	Description	Auth / Role
23	GET	/statistics	Get platform statistics	JWT
24	POST	/newsletter/subscribe	Subscribe an email to newsletter	Public

Notes

- Company accounts are stored in the User collection with role = company; there is no separate Company model.
- Internship.company and Internship.category are currently String fields, not ObjectId references.
- Application has a unique compound index on (student, internship), preventing duplicate applications.
- Favorite has a unique compound index on (student, internship), preventing duplicate favorites.
- For CV upload, use multipart/form-data with the file field named cv.
